

Introducing the New

BRX

from GoldenEar Technology®

Bookshelf Reference X

“GoldenEar’s Astounding New BRX Defines State-of-the-Art Reference Bookshelf Performance with Fantastic Imaging, Incredible Transparency, Lifelike Detail and Powerful Bass!”

“Listening to the sonic excellence of the BRX...it is hard to imagine that a bookshelf speaker can sound this good...airy and detailed, solid bass and excellent imaging.”

—Maureen Jenson, *Technology Insider*

GoldenEar Technology is pleased to announce the introduction of a new ultra-high-performance compact bookshelf/stand-mount loudspeaker, the BRX. The goal of the BRX development project was to create a gorgeous, luxuriously finished, ultra-compact loudspeaker which would incorporate the latest advanced technology developed for GoldenEar’s Triton Reference and Reference One.R, in order to achieve truly superb sonic performance typical of larger, much more expensive units.

“I was amazed...like all GoldenEar products, they punch way above their weight and deliver fantastic sound with detailed and airy highs, cymbal strikes that decayed beautifully and guitar plucks with textural detail.”

—John Sciacca, *Residential Systems*

The BRX was engineered to simply be the best sounding true bookshelf/standmount loudspeaker on the planet. It incorporates a 6" cast-basket bass/midrange driver with a focused-field magnet structure. The cone is formed with a proprietary curve, from a special formulation of polypropylene, which combines superior internal damping with a high speed of wave transmission through the cone (Young’s Modulus). This is basically the same driver used in the award-winning Triton Reference tower. The tweeter is the same Reference High-Gauss High-Velocity Folded Ribbon used in both the Triton Reference and Triton One.R as well as the SPS. The two drivers are perfectly blended with a unique “balanced crossover” with a floating configuration

that incorporates high quality film capacitors. New internal speaker wire, which has a unique twist as in the Triton Reference, is utilized. A pair of inertially balanced 6.5" planar infrasonic radiators located on either side of the cabinet, acoustically load the active 6" driver as well as couple the internal bass energy to the room for tight, quick, extended bass response. The beautifully styled 12"H x 8"W x 12.25"D cabinet is luxuriously finished in hand-rubbed piano black lacquer.

“An incredible value...bass was solid and impactful...when fired up, these new speakers put out a sound that was dramatically opposite to their small size with a huge enveloping soundfield that put a big smile on my face.”

—Carlo Lo Raso, *Secrets of Home Theater*

The BRX has been engineered to deliver superior reference level performance for both two channel as well as home theater systems of the highest quality, with extraordinary three-dimensional imaging and high-resolution clarity. It has been voiced to match the Reference towers, with a tremendous sense of you-are-there lifelike immediacy. Overall frequency response is 40-35 kHz, efficiency is 90 dB and recommended associated amplification is 10-250 watts/channel. Visit your nearest GoldenEar Technology dealer and experience the BRX soon. Your ears will thank you!

“The tiny GoldenEar has made a big... impressive splash. Auditioned on a wide variety of program material, the BRX displayed a clean and open top-end, an uncolored midrange with solid imaging and bass response was more than comfortably deep.”

—Tom Norton, *Sound & Vision*
